Accessory

➔ STAR DK-AirCash

The Low Cost Accessory that will make any Manufacturer's Cash Drawer with a standard RJ-11 printer connection "Mobile"

Star is once again proving why they are leading the Mobile POS peripheral industry by providing the last piece in the Mobile POS jigsaw. "Mobilising" the most basic piece of POS equipment, the humble cash drawer has been the most complicated due to its simplistic design. Traditionally cash drawers could either be opened by a key or fired through its "wired" connection to a printer. The obvious solution for Mobile POS was to produce dedicated WiFi / Bluetooth / Ethernet cash drawers, but this has proved to be very expensive and has reduced the user's choice in cash drawer design – flip top or drawer style; large / compact size; number of flat or upright note / coin dividers etc.

Neat, Compact design (152.5mm w x 76mm d x 27.6mm h)

Retro-fit to existing installed cash drawers (contact Star if you have any support questions Support@Star-EMEA.com)

Draw Open Status retrievable by host.

Code compatible with existing Star Line mode commands as well as Star's superior suite of drivers SDKs found on GooglePlay .

Simple to set up with Dip Switches for LAN/ Bluetooth selection as well as other features including Cash Drawer Switch Polarity etc.

SAC10E Ethernet

SAC10EB Android Bluetooth & Ethernet

SAC10EW WiFi & Ethernet

➔ Star DK-AirCash

Star's years of POS peripheral experience and pioneering determination has led to the ultimate low cost solution for "mobilising" the last piece of the POS jigsaw – Star's DK-AirCash. This simple accessory can now enable mobile POS users to open the cash drawer of their choice with a standard RJ-11 printer connection via their mobile device in a variety of environments. This simple, yet invaluable, accessory can be attached to any retailer's cash drawer and once connected to a 24 volt supply such as Star's PS60 can communicate via Ethernet, WiFi or Bluetooth depending on the communication required by the user's choice of mobile device without extra work or investment needed to implement this new technology.

DK-AirCash SAC10E with Star WiFi Power Pack option

DK-AirCash SAC10E Ethernet

Designed primarily for queue-busting in-store, the Ethernet supported cash drawer can be fired by WiFi mobile devices communicating via the store's WiFi infrastructure opening the cash drawer via the store's wired network. Star's WiFi power pack could also be used as a quick and simple way to upgrade this option to a low cost WiFi version.

DK-AirCash SAC10EB Bluetooth SPP & Ethernet

Bluetooth is vital for the latest cloud based payment solutions. Where these solutions are being used there is normally no network available and users were creating personal hotspots to communicate with other peripherals. The Bluetooth SAC10 version of Star's DK-AirCash ignores all these issues and allows the Apple, Windows or Android device to communicate directly with both the mobile receipt printer and cash drawer independently.

SAC10EW WiFi & Ethernet

The WiFi option enables a user to communicate directly with the DK-AirCash enabled cash drawer over IP without the need for a wired connection. This means that the seasonal or promotional POS system can be freely moved around the store or restaurant whilst still connected to the store's WiFi
